

# BRIDGING ACADEMIA AND ENTERPRISES

## FOR INNOVATIVE MOBILITY SOLUTIONS

### Our Goals

MobiNexus aims to bridge the gap between academia and industry in the transport and mobility sector, driving collaboration, innovation, and digital transformation across Europe.

Built upon the existing Mobility Innovation Network (MIN) platform, MobiNexus will expand its capabilities with AI-powered networking tools, real-time ecosystem mapping, and immersive collaboration features that bring stakeholders together to design the future of sustainable mobility.

Through this approach, the project contributes directly to the goals of the European Green Deal and the New European Innovation Agenda, combining digital innovation, green transition, and entrepreneurial growth to achieve smarter, more connected transport systems.

**SHARED MOBILITY | ELECTRIFICATION | AUTONOMOUS VEHICLES**

#### The MobiNexus Platform

The MobiNexus Platform is an AI-powered matchmaking and collaboration tool that connects stakeholders across Europe's mobility ecosystem from startups and research institutions to industry leaders and public authorities. By linking organisations based on expertise, interests, and innovation needs, the platform breaks down silos and accelerates the transfer of knowledge, technologies, and solutions. It is more than just a networking hub, it provides an interactive space for collaboration, opportunity discovery, and co-creation, making innovation in sustainable transport more open, accessible, and efficient.

#### The Mobility Innovation Toolkit

The Mobility Innovation Toolkit gathers practical resources, templates, and methodologies to help researchers, entrepreneurs, and policymakers bring mobility ideas to life. Built on real-world experience from project partners, the toolkit offers guidance on innovation management, funding strategies, ecosystem engagement, and technology validation. It serves as a bridge between theory and practice, equipping stakeholders with the tools they need to design, test, and scale new mobility solutions that align with European priorities for sustainability and connectivity.

#### The Integrated Knowledge Transfer Programme

The Integrated Knowledge Transfer Programme promotes the exchange of skills, expertise, and talent across regions and sectors. It brings together academia, industry, and policymakers through workshops, mentoring, and training opportunities that foster collaboration and professional growth. By connecting mobility innovators across Europe, this programme ensures that the knowledge generated through MobiNexus continues to circulate, evolve, and inspire new partnerships long after the project ends.

the European Union

The Mobinexus project has received funding from the European Union under the Horizon Europe programme, Grant Agreement no. 101215280

## Why MobiNexus Matters

Europe's mobility landscape is evolving fast but innovation often happens in silos. MobiNexus bridges those gaps, creating stronger connections between universities, start-ups, investors, and industry leaders. By fostering collaboration and knowledge exchange, the project accelerates the development of solutions that make transport smarter, greener, and more inclusive.

### Did You Know?

Did you know that road transport accounts for around 20% of Europe's total greenhouse gas emissions and remains the only sector that hasn't reduced its emissions since 1990?

Despite ambitious climate targets under the European Green Deal, 95% of transport energy still comes from fossil fuels. To meet the EU's goal of climate neutrality by 2050, mobility systems must undergo a complete transformation, one driven by digitalisation, collaboration, and innovation.

That's where MobiNexus steps in: connecting academia, industry, and investors to design smarter, cleaner, and more efficient transport solutions that align with Europe's vision for a sustainable future.

### Partners

### Contact

#### Project Coordinator

Coventry University.

CU Services Limited (CUS Ltd) Priory Street, Coventry, CV1 5FB.

#### Dr Eleni Anoyrkati

Lead Researcher, MobiNexus Project.
